SUMMARY

Software Engineer with 2.5+ years of experience building cloud-native applications and cloud infrastructure across **AWS** and **GCP**. Skilled in **Python, FastAPI, Terraform, CI/CD, Linux**, and observability, with hands-on experience designing scalable systems, automating deployments, and implementing secure cloud architectures.

EXPERIENCE

Software Engineer

Feb 2024 – Present

Neural Labs Pvt Ltd

Hyderabad, India

- Architected secure multi-tenant SaaS backend services using **FastAPI, Pydantic, and Firestore**, engineering zero-trust cross-cloud data ingestion via **AWS IAM Role Assumption, GCP Service Account Impersonation**, and **Azure Entra ID Workload Identity Federation**.
- Implemented fine-grained **RBAC, JWT** authentication, and tenant isolation; integrated a **Redis (AWS ElastiCache)** caching layer to optimize session validation, reducing auth latency by **~40%**.
- Owned end-to-end observability by instrumenting **OpenTelemetry distributed tracing and Grafana Tempo** in FastAPI microservices, establishing **Prometheus and Grafana** alerting to cut incident resolution time by **~60%**.
- Built and maintained CI/CD pipelines using **GitHub Actions** to automate application build, testing, and deployment workflows, improving release consistency and reducing manual deployment effort.
- Enforced IAM least-privilege policies, managed secrets via Secret Manager, and built a serverless pipeline using **AWS Lambda** to stream **CloudWatch logs to S3** and store audit events in **BigQuery**.

Data Analyst Intern

May 2025 – Aug 2025

DataBeat

Hyderabad, India (Onsite)

- Optimized **SQL/BigQuery** queries, built **Looker Studio** dashboards, and automated recurring reporting workflows using **Python and Google Apps Script**, reducing manual effort by **~70%** and earning a full-time return offer.

SKILLS

Cloud Platforms: AWS: EC2, VPC, IAM, S3, RDS, Lambda, ALB, Auto Scaling, Route53, CloudWatch, CloudFront, ElastiCache, SQS/SNS, Boto3 | **GCP:** Compute Engine, Firestore, Memorystore, BigQuery
Infrastructure & DevOps: Linux, Git, Terraform, CI/CD, GitHub Actions, Jenkins
Monitoring & Observability: Prometheus, Grafana, Alertmanager, OpenTelemetry, Dynatrace
Programming Languages: Python, JavaScript, SQL
Backend & Databases: FastAPI, MySQL, Firestore, Redis
Frontend: React.js, Material UI (MUI)

PROJECTS

Serverless Document Management System | AWS Lambda, DynamoDB, EventBridge, Terraform

- Architected a serverless document platform using **AWS Lambda, API Gateway, S3, and DynamoDB** for secure uploads and scalable REST APIs.
- Engineered an event-driven pipeline via **EventBridge, SNS, and S3 Presigned URLs** for asynchronous processing and automated notifications.
- Provisioned infrastructure via **Terraform** (S3 state, DynamoDB locking) and automated deployments utilizing **GitHub Actions CI/CD**.

AWS Three-Tier Infrastructure & Observability | Terraform, EC2, ALB, RDS, Prometheus, Grafana

- Provisioned a highly available three-tier AWS architecture (VPC, EC2, ALB, Auto Scaling, RDS) using **Terraform** via IaC best practices.
- Implemented centralized observability via **Prometheus, Grafana, Alertmanager, and CloudWatch** for proactive multi-environment alerting.

EDUCATION

Bachelor of Engineering in Information Technology

2020 – 2024

Osmania University

CGPA: 8.88 / 10
